2MM VINYL FLOORING  
NO GLUE NEEDED, SELF ADHESIVE

## 2024

OURS

### Hot melt glue

- ✓ Complicated process, cost 1.5 times as much as liquid glue.
- ✓ Good adhesion, the more you use, the more sticky it will be
- ✓ Odourless and formaldehyde-free, environmentally friendly

Other

### liquid glue

- ✗ Simple process, diluted with water
- ✗ Poor adhesion
- ✗ Smells bad

## HOW TO CHECK

Tear the backing paper, smell the glue, no smell and no formaldehyde.

## USAGE

**Can be used on any smooth surface, whether it's a regular floor, smooth concrete floor, tiled concrete floor, tiles or smooth wood**

-  If the floor is painted or uneven, it is not recommended to install it because the floor adhesion is not good. However, if the customer still wants to stick za in that position, it needs to be combined with glue to increase the viscosity
-  Certain types of floors are not suitable for sticking. If the adhesion is not good, please apply strong glue on the floor before installation

**CLEAN THE FLOOR**

## FLOORING ACCESSORIES

### Skirting & Profile Application

#### Adaptation (A-profile)

To transition new floor to existing floor that is different in height. This is used when you have two area with new and existing floor.

#### Stairnose (SN-profile) and L-profile

L profile is for flooring at staircase, doorway, entrance (with step up). This is to close the connection edges between floorboards.

SN-profile functions the same as L profile, is to cover connection. Protect feet from injury.

Available rounded edges and L-shape for different flooring thickness.

#### End (N-profile)

To close the gap around corner such as around cabinet and sliding door. Install all around walls (when existing skirtings are not removed).

#### Transition (T-profile)

Connecting two areas with same height flooring and hiding the expansion gap in between. Comes with a PVC track, glue it down and snap the profile on it.

#### Skirting

To cover the expansion gap around all sides of walls with matching colour, protect from damage such as scratches & knocks by foot traffic or furniture.

## SKIRTING & PROFILE PURPOSE

In floor installation, **SKIRTING** serve important purpose.

### Aesthetic Enhancement

Skirting serves as a stylish and practical finishing detail, covering the joint between the floor and the wall. Available in a wide range of colors and designs, it complements various interior styles and architectural themes, enhancing the overall appearance of any space. Beyond its visual appeal, skirting also provides essential protection, safeguarding walls from damage caused by foot traffic, furniture, and routine cleaning, while ensuring long-term durability and maintenance ease.

### Protection

Skirting helps protect the bottom of the wall from damage caused by furniture, foot traffic, and cleaning equipment like vacuum cleaners. Without skirting, walls are more vulnerable to scuff marks, scratches, and dents. It acts as a protective barrier, absorbing impacts and preventing direct contact with the wall.

### Concealing Imperfections

Skirting effectively hides imperfections in the flooring installation, such as gaps, uneven edges, or expansion joints. It creates a smooth transition between the floor and the wall, offering a cleaner, more polished appearance while masking any installation flaws.

In floor installation, **PROFILES** serve important purpose.

### Transition

Profiles provide smooth transitions between different flooring materials, such as tile to hardwood, carpet to tile, or laminate to vinyl. They ensure a seamless flow between rooms with varying flooring types, enhancing the overall aesthetic and creating a cohesive look throughout the space.

### Protection

Profiles protect the edges of flooring from damage caused by foot traffic, furniture, and general wear. They help prevent chipping, cracking, and splintering, thereby extending the life of the flooring and maintaining its appearance over time.

### Safety

Certain profiles, such as stairnose profiles, enhance safety by reducing the risk of slips and falls on stairs. They create defined edges on each step, improving traction and visibility, especially in high-traffic areas.

### Expansion Gaps

Profiles, including expansion joint profiles, allow for the natural expansion and contraction of flooring materials due to changes in temperature and humidity. This helps prevent buckling, warping, and structural damage by accommodating movement without restriction.

### Aesthetic Enhancement

Available in a range of styles and colors, profiles complement the overall design of a space. They add a decorative element to the flooring installation, enhancing the visual appeal and contributing to a polished, cohesive look.

## SKIRTING & PROFILE PURPOSE

In floor installation, **SKIRTING** serve important purpose.
